

HUGOMOJO ANNUAL ACCESS

Annual Member System

A 12-month operating system for staying oriented, filtering AI income signals, tracking execution, and recalibrating your path before you waste another quarter.

1. What You Bought

Annual Access is not a bigger content folder. The value is the system: recurring signal filtering, versioned prompts, personal execution records, and quarterly recalibration.

The core promise: HugoMojo helps you keep one clear path visible while AI tools, platforms, and market opportunities keep changing.

2. The Five Layers

LAYER 01

Monthly Ecosystem Signal Reports

Path-specific market updates for Hunter, Artisan, and Architect. What changed, what matters, what to test, and what to ignore.

LAYER 02

Quarterly Path Calibration

A structured review that turns your last 90 days into a clear keep, stop, adjust, or pivot decision.

LAYER 03

Versioned Prompt Vault

Prompts organized by path and use case, updated as AI workflows and market behavior change.

LAYER 04

Weekly Signal Digest

One short weekly filter: signal, tool shift, tactic, example, and one thing to ignore.

LAYER 05

Execution Tracker

A simple record of tests, milestones, replies, sales, blockers, prompt changes, and next actions.

3. Your First 30 Days

DAY	ACTION	OUTCOME
D+0	Save your Master Key assets and this Annual Member System.	You have the full starting map.
D+1	Complete your baseline profile: time, tools, budget, current skill, first target.	Your future calibrations have a starting point.
D+3	Choose one primary path for 30 days. Do not split attention.	Your execution becomes measurable.
D+7	Run the first small test: outreach, product page, offer draft, or workflow audit.	You get signal from the market.
D+14	Review what happened. Keep the signal, remove the noise.	Your second test becomes better than the first.
D+30	Complete your first scorecard.	You know whether to continue, adjust, or pivot.

4. Monthly Operating Cycle

1. **Week 1:** Read the monthly ecosystem signal report for your path.
2. **Week 2:** Use the Prompt Vault to build or update one offer, product, or audit workflow.
3. **Week 3:** Publish, send, pitch, or test the asset in the real market.
4. **Week 4:** Log the result, update your tracker, and decide the next test.

5. Quarterly Calibration Form

Use these questions before each quarterly calibration.

1. Which path did you focus on this quarter?
2. What did you actually do each week?
3. Which offer, product, or system did you test?

4. How many real market actions did you take?
5. What replies, sales, feedback, or silence did you receive?
6. Where did execution slow down?
7. Which assumption was proven wrong?
8. Which signal is worth doubling down on?
9. What is your next 90-day target?
10. Should you stay, adjust, or pivot?

6. Execution Tracker

PATH	EARLY MILESTONES	PROOF TO RECORD
Hunter	Offer built, 20 messages sent, first reply, first paid trial.	Message count, reply rate, client feedback, paid amount.
Artisan	Product idea selected, small product built, product page published, first feedback.	Page visits, saves, replies, sales, product objections.
Architect	Niche selected, audit offer drafted, 20 audit messages sent, first call.	Business type, pain points, call notes, proposal response.

7. Versioned Prompt Vault Rules

- Use prompts as working assets, not magic scripts.
- Save the prompt version you used for each test.
- Record what changed: better reply rate, clearer output, faster delivery, or no improvement.
- When a new Vault version arrives, update only the prompts you actually use.

8. Member Rule

Do not chase every AI opportunity. Pick one path, run the smallest real test, record the result, and recalibrate from evidence.
